MODUS M365 Disposal Management – For all waste disposal accounting systems

RECYCLING

DUAL SYSTEM

INTERSEROH

THINK CLEAN

Logistics – Storage – Simple – Flexible

We are lucky to live in a country that is largely free of wild garbage dumps, where recycling works and pollution is tackled. Nevertheless, our goods must be packed and secured for transport. Complex logistics are required to cope with the mass of packaging material, to which every company must make its contribution. As always, there is not just one, but many solutions.

With the disposal module for Microsoft Dynamics 365 Business Central, you simplify your daily work in dealing with waste disposal accounting systems such as ARA, Duales System Deutschland (DSD), Landbell or Interseroh.

MODUS Consult offers the answer to all questions of business processes in the food industry, wholesale and manufacturing industry with the ERP industry solution based on Microsoft Dynamics 365. The management of different article structures, the entire warehouse process as well as procurement and shipping processes are available in one system, everywhere and mobile at a glance.

This is Next Level Business IT.

MODUS Consult accompanies you into the future of corporate management. For all business processes and especially for selected industries. No matter where you are: we'll take you with us. Let's get started.

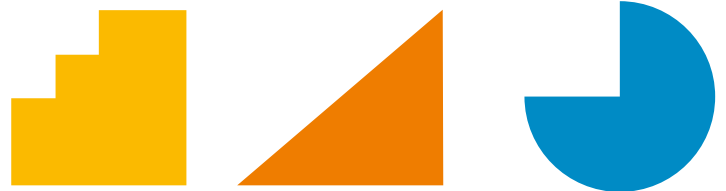

OUR OFFER IN DETAIL

The „M365 Disposal Management“ module of the MODUS Consult GmbH offers the possibility

- to set up any number of waste disposal accounting systems.
- to assign debtors and delivery addresses to the respective disposal systems.
- to maintain separate packaging categories (e.g. tinplate, plastics, etc.) for each disposal system. Likewise, the same codes can be set up for the same packaging categories under different disposal systems. (DSD, Landbell and Interseroh use the same categories, such as G.5 for plastics).
- to store separate prices with a validity period (start and end date) for the combination waste disposal system/ packaging category.

- to set up separate packaging lists for each disposal system and to assign different packaging categories to them. Identical packing lists can also be set up for different disposal systems. A copy function helps to copy complete packaging lists (header and lines) to another disposal system.
- to allocate these packing lists to individual articles, so that a sale of these articles automatically leads to their packaging is taken into account in the waste disposal invoice.
- to print billing documents for DSD, ARA, Landbell, Interseroh.
- to prepare the notification to the „Stiftung Zentrale Stelle Verpackungsregister“.
